Aditya Parkhe

Badlapur | +91 - 9987568753 | Linkedin | Github | adityaparkhe442@gmail.com

SKILLS

- Python, Deep Learning, AWS, Google Cloud / GCP, Pandas, Git, Fast API, PostgreSQL

EXPERIENCE

AI Engineer Jan 2025 - Mar 2025

AI Engineer, Eipi Media

- Designed and implemented automation workflows, boosting operational efficiency by 30% and significantly reducing manual effort.
- Leveraged Midjourney and GenAI tools to create engaging content and visuals, increasing audience engagement by 25%.
- Integrated AI-driven automation solutions, optimizing data handling and reporting, which improved turnaround time by 40%.
- Automated data extraction and visualization processes through scripting and API integration, cutting data processing time by 50%.

PROJECTS

UFC Prediction Project + Research

https://github.com/adiP66/ufc-research

- Conducted and currently publishing a research paper with colleagues on the interpretability and profit of machine learning models for UFC fight prediction.
- Developed a UFC fight prediction engine achieving 64%+ accuracy on holdout data, outperforming the Vegas betting odds.
- Engineered a robust feature pipeline using Pandas to transform raw fight statistics into 100+ predictive signals, including z-score ratios, exponentially weighted moving averages (EWMA), and momentum trend ratios.
- Orchestrated distributed training jobs on Azure ML Studio, managing compute clusters and debugging Ray/multiprocessing and also solving critical data leakage that impacted the robustness of the model.

ETL Project (AWS, Python)

https://github.com/adiP66/awsETLproject

- Developed and prepared a data pipeline using AWS services to extract, process, and visualize real estate data, enhancing scalability and reliability.
- Integrated Zillow API via RapidAPI, successfully managing over 10,000 daily requests with a 99.9% success rate, ensuring data accuracy.
- Constructed and controlled an ETL pipeline with AWS tools, including S3, Lambda, Redshift, and Quicksight, improving data processing efficiency by 30%.
- Wrote and optimized complex SQL queries in Redshift to transform and aggregate data for visualization in Quicksight.

Fight Prediction API (Python, FastAPI)

https://github.com/adiP66/ufc-fastapi-api

- Built a FastAPI-based UFC analytics & prediction API serving 9 REST endpoints and delivering probabilistic fight outcome predictions using an AutoGluon ensemble trained on 5,000+ historical fights from the research.
- Integrated a production ML model into FastAPI, implementing on-demand inference, model loading at startup, and feature pipeline execution.
- Implemented fuzzy name matching (RapidFuzz/TheFuzz) to reliably resolve 2,000+ fighter and event name variations, improving data consistency and lookup accuracy across scraped and historical datasets.
- Integrated live web scraping from multiple UFC data sources to dynamically ingest event schedules, fight cards, fighter profiles, and rankings, reducing manual data updates by 100%.

ACHIEVEMENTS

Attained Top 10% Most Active User' badge on LeetCode by dedicating 10+ hours per week to solving coding problems; improved code quality, which resulted in fewer debugging sessions and faster project delivery.

EDUCATION

B.K. Birla College of Arts, Science & Commerce 2026
MSc.AI

Chandibai Himathmal Mansukhani College 2024
BSc.CS
